A Portal for Software Security

Nancy R. Mead & Gary McGraw. IEEE Security & Privacy, July/August 2005.

From the First Paragraph

One of the real challenges facing the emerging field of software security is the lack of an easily accessible common body of knowledge. Simply put, most software developers and architects—the very people who need to understand and practice software software security—remain blithely unaware of their critical role. Without their direct participation, software security will languish. In this installment of Building Security In, we describe a software security portal that the US Department of Homeland Security (DHS) National Cyber Security Division (NCSD) is developing (along with the Carnegie Mellon Software Engineering Institute [SEI] and Cigital). The launch of this portal is scheduled for October 2005 as part of the US-CERT Web site. The portal aims to provide a common, accessible, well-organized set of information for practitioners wishing to do software security.
